

INSTALLATION TIPS FOR HEXAGON TILES AND MOSAICS

EVERSTONE Hexagon Porcelain tiles and mosaic sheet components are cut under strict guidelines. To achieve the best aesthetic effect, we highly recommend following these basic installation instructions:

- Tiles should be laid following the direction of the surface pattern; this will keep any deviation due to factory cutting to a minimum during the installation.
- Back mesh mounted mosaic formats do not need to be laid following the direction of the surface pattern.
- The use of dedicated 3mm nylon 'Y' shaped spacers for tiles and mosaics will assist in a fast and more even installation. These spacers are available from all Everstone distributors.
- For best results we recommend the use of non-sanded grouts.

Please contact Everstone's sales office or your local authorised distributor for further assistance.
